

Fiber Sensors

All Optex-FA fiber optic sensors are designed for high performance and ease of use.

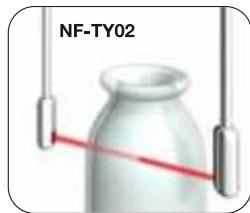

From models with digital display and pushbutton teach to manual adjust there is an amplifier to solve your application. All amplifiers are available in Cabled or M8 QD versions and are offered with a choice of NPN or PNP outputs.

D2RF series	117
BRF series	125
BIF series	129
NF series	132
NF02 / NF25 series	154

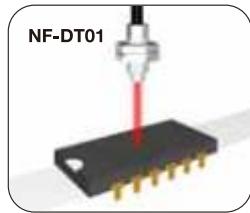

Digital Fiber Sensor D2RF series

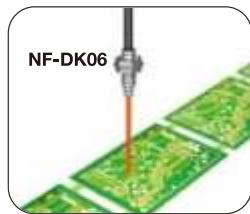

Applications

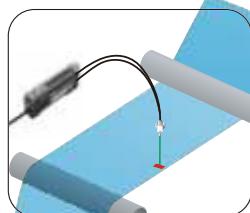

Bottle sensing in chemical environment
(Full power teaching)

Counting electric components
(One point teaching)

Sensing PC Board
(Two point teaching)

Detection of mark on sheet

Standard Type : Stand-alone use

(IP50 protection)

• D2RF-TN / TP / TCN4 / TCP4

(IP66 protection)

• D2RF-2TN / 2TP / 2TCN3 / 2TCP3 / 2TCN4 / 2TCP4

- **Digital Fiber Amplifier with Two Independent Outputs.**

- **High speed 60 micro second response.**

- **SAM Circuit - The ASC function
(Auto Sensitivity Control)**

Product Types

Standard Type : Stand-alone use

IP50 protection	D2RF-TN/TP D2RF-TCN4/TCP4	2 meter cable M8 QD, 4 pin
IP66 protection	D2RF-2TN/2TP D2RF-2TCN3/2TCP3 D2RF-2TCN4/2TCP4	2 meter cable M8 QD, 3 pin M8 QD, 4 pin

Standard Type : Interconnection use

IP50 protection	D2RF-TMN/TMP D2RF-TSN/TSP D2RF-TMCN4/TMCP4	Master Unit Slave Unit Master Unit, M8 QD
	D2RF-TSCN4/TSCP4	Slave Unit, M8 QD

Mark Sensor Type : Stand-alone use

IP50 protection	D2GF-TN/TP D2GF-TCN4/TCP4	2 meter cable M8 QD, 4 pin
IP66 protection	D2GF-2TN/2TP D2GF-2TCN3/2TCP3 D2GF-2TCN4/2TCP4	2 meter cable M8 QD, 3 pin M8 QD, 4 pin

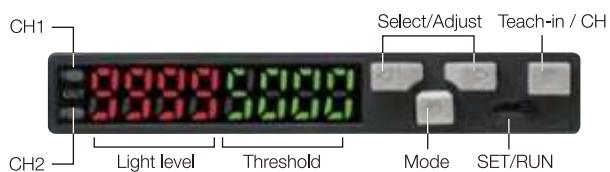

Analogue Type : Stand-alone use

IP50 protection	D2RF-TAN/TAP	4-20mA Analog Transistor output
IP66 protection	D2RF-2TAN/2TAP	4-20mA Analog Transistor output

Features

Two four digit display's.

Received Light Level and Threshold Setting

Standard Type : Interconnection use

(IP50 protection)
• D2RF-TMN / TMP / TMCN4 / TMCP4 / TSN / TSP / TSCN4 / TSCP4

Mark Sensor Type : Stand-alone use

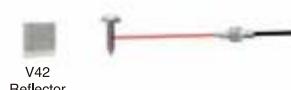

(IP50 protection)
• D2GF-TN / TP / TCN4 / TCP4
(IP66 protection)
• D2GF-2TN / 2TP / 2TCN3 / 2TCP3 / 2TCN4 / 2TCP4

6 teach method for individual applications.

Full Power Teaching

Standard detection mode for Thru-beam type sensing but applicable for retro-reflective sensing also.

Single point Teaching

Set without a target present.

Two points Teaching

Standard detection mode for Diffuse type sensing.
It is possible to make fine adjustments.

Full automatic Teaching

Set while the equipment is operating.

Transparent / Glass Teaching

Ideal for the detection of glass, film, plastic or any transparent material.

SAM Circuit - The ASC function (Auto Sensitivity Control)

Our engineer "SAM" designed this function. The lens and/or reflector may be contaminated over time. The D2RF amplifier monitors the change in light level and automatically resets the threshold value.

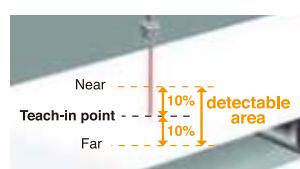

After cleaning off the lens / reflector it used to be necessary to reset the threshold setting. The D2RF does not require this step. Simply clean off the lens and wait three seconds without a target present. The sensor will automatically reset the threshold level for the change. This is how the SAM circuit works.

After cleaning the incoming light level will increase suddenly. The SAM circuit computes the preset threshold based on the increase in light intensity.

This function is available only in Transparent Detection Mode.

Zone Teaching

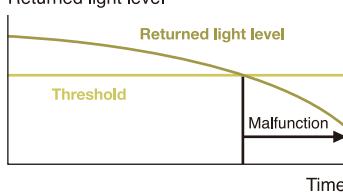

Similar to Area Teach Mode. This is useful if the conveyor moves closer to and farther from the sensor. An area +/- 10% of the teach point can be detected.

Conventional Sensor

Contamination on the lens will eventually cause the sensor to malfunction.

Returned light level

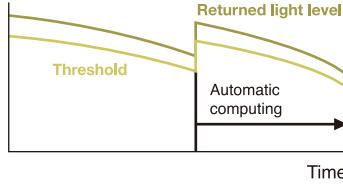

D2RF series

SAM Circuit

The threshold will automatically return to the preset level after the lens is cleaned off.

Returned light level

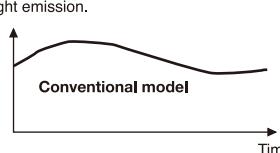

APC Function (Auto Power Control)

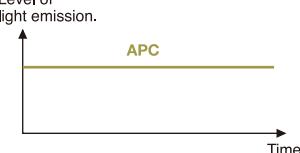

The APC function ensures precise sensing even when there are changes in the temperature or environmental conditions.

APC maintains a constant power level of light emission by regulating the current flow into the light emission element. The APC function can be turned On and Off.

Level of light emission.

Level of light emission.

Mark Sensor Type : Interconnection use

(IP50 protection)
• D2GF-TMN / TMP / TMCN4 / TMCP4 / TSN / TSP / TSCN4 / TSCP4

Analogue Type : Stand-alone use

(IP50 protection) (IP66 protection)
• D2RF-TAN / TAP • D2RF-2TAN / 2TAP

IP66 and IP50, two types.

If your application is around water or high humidity.

There is a model of the D2RF-T series with an IP66 rating.

60 micro second high speed response.

Both outputs can be set to operate at this speed.

This response time is available in 5 of the teach modes

Long Term Stable Detection.

A conventional 3 element LED will lose brightness over time. This results in a decrease in sensitivity in the sensor. Optex FA's new D2RF uses a 4 element LED to provide long service life. The Green LED type D2GF uses a "Glan N2" LED, which offers the best performance for Mark Detection with a Green LED light source.

**LED Power adjustment -
3 step adjustment of LED
emitting power.**

A highly reflective target will cause the amplifier to saturate making adjustment difficult. This can also happen if the fiber cable is mounted too close to the target.

In situations where the amplifier is saturated due to excessive reflected light, the power level of the emitting LED can be decreased to 50 or 25 percent.

Power setting

100%	
50%	
25%	

Cross Talk Prevention

The amplifier frequencies are automatically set between the Master and Slave units. Cross talk prevention is possible for up to 4 amplifiers.

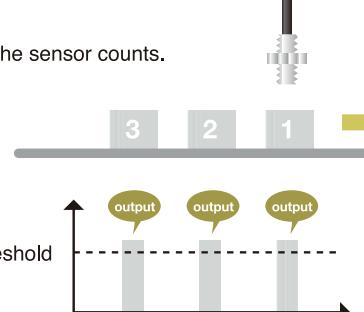

Counter Mode

The D2RF amplifier features a built-in counter. This makes it convenient to count parts, for example 10 pcs. in a bag. The output turns on once the sensor has counted the desired quantity. Simply program in the number of parts to count.

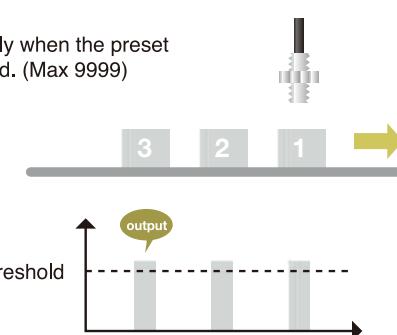

Normal Mode:

An output comes as the sensor counts.

Counter Mode:

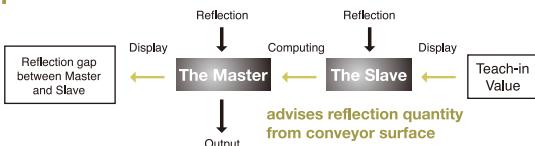

An output comes only when the preset numbers are counted. (Max 9999)

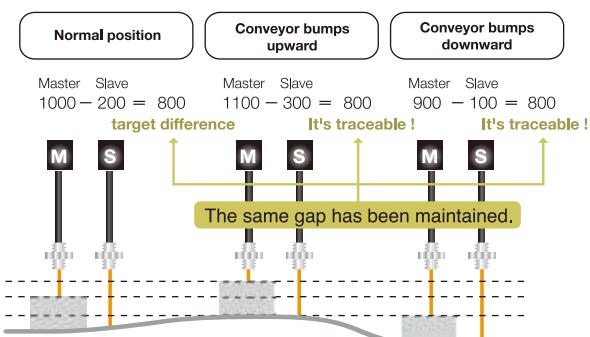

Differential Sensing Mode

A bumpy conveyor always makes stable detection difficult. The D2RF-T solves this problem with the Differential Sensing Mode. The Master and Slave amplifiers will calculate the difference between the reflection from the background and the target (see picture below). No matter how much the surface of the conveyor moves up and down the D2RF-T can follow the change and reliably detect the target.

Operation Flow:

How to follow the changing condition!

Automatic Tuning

This provides a way to boost or dampen the excess gain level of the amplifier in poor sensing conditions (low light level, low sensitivity or saturating condition).

Automatic Tuning is ideal when you need a little bit better excess gain level, or when detecting a dark object with diffuse reflective fiber cables.

Edge Sensing

The sensor output triggers when there is a sudden increase or decrease in the light level. This is ideal for sensing objects without being influenced by a dusty environment.

Rising Edge
Sensing Mode

Falling Edge
Sensing Mode

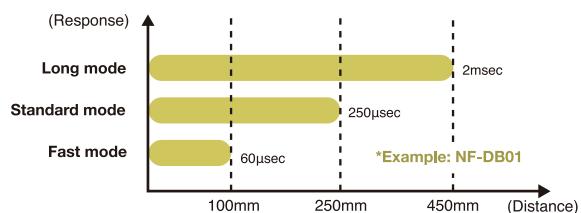

Selectable Response Time

The Response time will affect the sensing distance.

The D2RF-T has three choices (Long, Standard, and Fast), select the response time based on the required sensing distance.

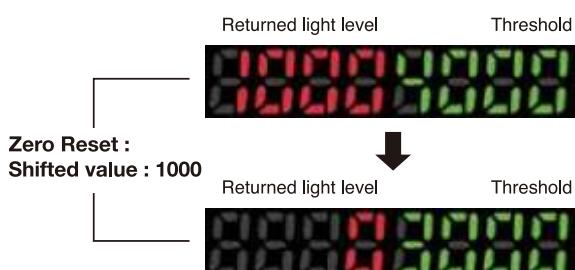

Long Mode boosts the power for the maximum sensing distance with a 2 msec. response time.

The Fast Mode has a reduced sensing distance but provides high speed 60 μ sec. response.

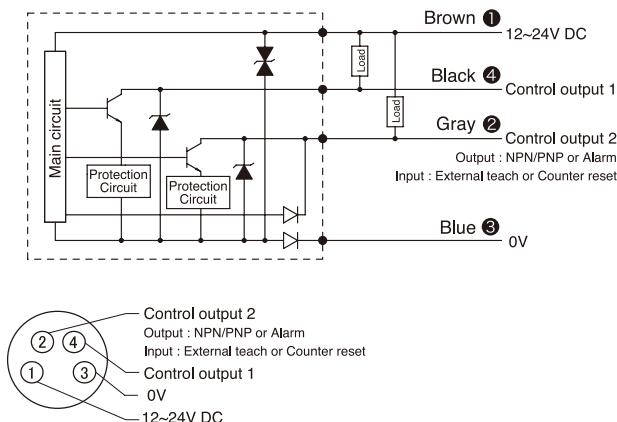

Zero Reset

The sensor display can be reset to zero. This is useful for adjusting the display's of the Master and Slave units to read the same. It is also good to set the value to zero when the light is interrupted.

Two Independent Outputs. Each output can be set separately.

The 2nd output can be configured as an external Teach input.

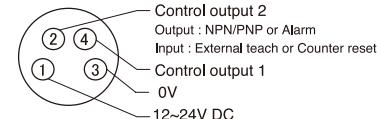

The operation of each output can be set to Light-On / Dark-On. Also, the Threshold level, Timer settings, etc. of each output can be set independently. The Analog output type (D2RF-TAN/P) provides a 4 ~ 20 mA (gray wire) analog output and a NPN (or PNP) digital output (black wire).

The second output can be configured as an Alarm output (self-diagnostic). It can also be set to operate as an External Teach Input or Counter Reset Input if the Counter function is being used.

External Teach Input (CH2)

It is possible to have a Remote Teach Input if the CH2 output is re-assigned as an input.

When using the Remote Teach with Interconnected amplifiers all units will perform the Teach function simultaneously.
(This function is not available for Analogue Type)

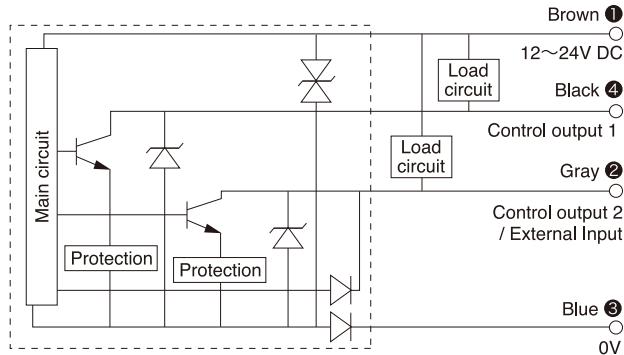

The operation of each output can be set to Light-On / Dark-On. Also, the Threshold level, Timer settings, etc. of each output can be set independently. The Analog output type (D2RF-TAN/P) provides a 4 ~ 20 mA (gray wire) analog output and a NPN (or PNP) digital output (black wire).

The second output can be configured as an Alarm output (self-diagnostic). It can also be set to operate as an External Teach Input or Counter Reset Input if the Counter function is being used.

Fiber Sensor NF series

Fiber Sensors Overview

A complete fiber optic sensor consists of the amplifier and a fiber optic cable. The fiber optic cable is chosen based upon the specific application. Optex offers more than 80 different cables in both Thru-beam and Diffuse sensing modes.

When to use Fiber optics

- **Confined areas**

The small size and flexibility of fibers allows precise positioning where space is limited.

- **High temperature applications**

Fiber optic assemblies can tolerate elevated temperatures in some cases as high as 300°F.

- **High vibration and shock**

The low mass of fibers enables them to withstand extreme vibration and mechanical shock.

- **Noisy environments**

Fibers are non-electronic mechanical components, and are completely immune to electrical noise.

- **Corrosive and wet environments**

Special purpose fibers withstand corrosive materials, moisture and even repeated washdown.

- **Unique target shapes and requirements**

Fiber optic sensing heads can be custom-designed and optimally "shaped" to the physical and optical requirements of a specific application.

1. Amplifiers

The amplifier contains the electronics, transmitting / receiving LED's and is the mechanical interface for the fiber. The D2RF series amplifiers are sealed and have an IP67 rating. They can easily be DIN-rail mounted directly on the machine or in a centralized control enclosure.

OPTEX FA Amplifiers for NF series Fibers

(Red LED) Digital Amplifier

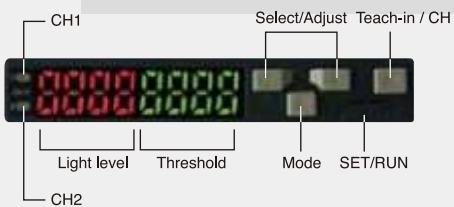

D2RF series

(Green LED) Digital Mark Sensor

Amplifier Features

- Digital Fiber Amplifier with Two Independent Outputs.
- High speed 60 micro second response.
- SAM Circuit gives automatic sensitivity control.
- 6 different teach functions

(Red LED) Fiber Amplifier

BRF series

(Red LED) High Speed Type

BRF-H series

(Green LED) Mark Sensor

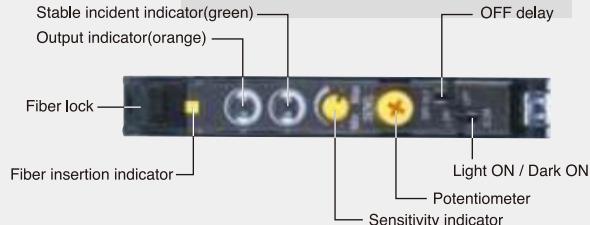

BGF series

(Infrared LED) Moisture Sensing Amplifier

BIF series

Amplifier Features

- 4 models: Standard, High Speed, Mark Detection and Moisture Detection.
- Unique "Moisture Sensing Type" BIF-W series senses the presence of moisture in a product.
- Interconnection of up to 100 amplifiers is possible (ambient temp. approx 45°C, @ 12VDC)

2. Fibers

Fiber optic cables are non-electronic, light-transmitting, optical quality glass or plastic strands with cladding. The fibers serve as a light guide, they are used to transmit the light from and return the light to the amplifier. Glass fibers are arranged in bundles, while plastic fibers are typically packaged as monofilaments with a protective jacket of polyethylene, PVC, stainless steel braid or other material. Fiber cable sensing tips can have a wide variety of shapes and configurations.

Plastic Fibers

Plastic fibers are best for general purpose use, and where severe flexing like R=2 is required; they can be cut-to-length in the field, and are less expensive than glass fibers.

Features:

- Inexpensive and easily cut to length during installation.
- Bend very easily to fit precisely where you want them.
- Special high-flex models withstand flexing.
- Special jackets withstand corrosion, impact and abrasion.
- Quickly custom-designed and built for your unique applications.

Glass Fibers

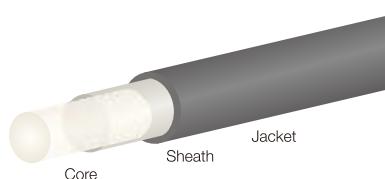

Glass fibers are the best choice for challenging environments such as high temperatures, corrosive materials and moisture.

Features:

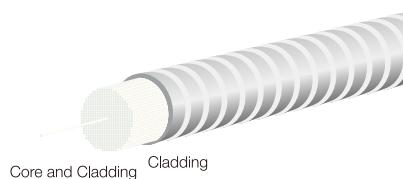

- Solve numerous challenging sensing requirements.
- For hostile environments such as high temperatures up to 300°C (572°F), corrosive materials, and extreme moisture.
- Withstand high levels of shock and vibration.
- Inherently immune to extreme electrical noise.
- Sheathing is typically stainless steel flexible conduit, but can be PVC or other flexible tubing.
- Quickly custom-designed and built for your unique applications.

Plastic vs Glass Fiber Construction

Plastic Fibers

Glass Fibers

Notes on fibers:

Core

Thin glass or plastic center of the fiber through which light travels,

Cladding

Outer optical material surrounding the core that reflects light back into the core.

Jacket

Protective layer to protect plastic fiber from damage and moisture.

Fiber Unit Selection Guide

Standard

Acrylic monofilament fiber of Bend Radius between R = 15mm and 25mm.

Coaxial

For tight alignment to the target.

Multi-core

Multi-cored under cladding and jacket.

Flexible

Repeat bending type of between R = 2mm and 4mm.

Sleeve

A long tip that can be bent to focus on the target.

Sideview

Fiber Optic with 90 degree angled end tip.

Convergent

Specular reflective optics with convergent beam spot.

High temperature

Durable to high temp not having transmission loss and fiber shrinkage.

Chemical resistant

Unlike acrylic fibers the jacket protects the fiber from chemical environments.

Liquid

For liquid level sensing.

Array

For applications of area sensing

Mapping application

For Mapping applications.

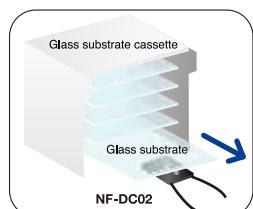

Water

Water/Moisture sensing type with 1.45 µm IR element.

NF series Plastic Fiber Optics

- Optex FA plastic fiber optic cables are easy to use and are more economical than glass fiber optic cables. Plastic cables can be used in confined area as where the mounting space is limited and the use of a self-contained photoelectric sensor is not practical.**
Plastic fiber optic cables are ideally suited for applications involving small-sized objects or for repeated bending.
- Plastic fiber optic cables are designed in the following configurations Regular, Coaxial, Multi-core, Side-view, Convergent, Chemical resistant, Liquid level detection, High temperature and with bendable metal sleeve.**
A minimum bend radius of R=2 mm is available for some fibers.
- Special fibers ideal for various applications are available upon request.**

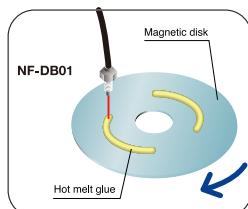

Applications

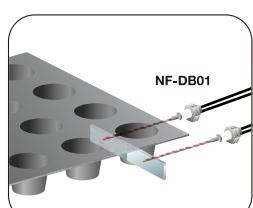

Detecting glass substrate

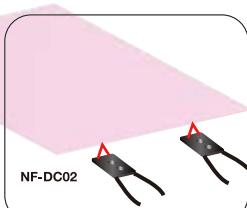

Detecting liquid level

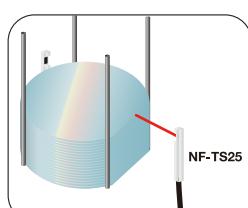

Detection of hot melt glue on magnetic disk

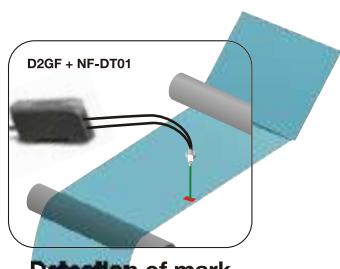

Positioning tray

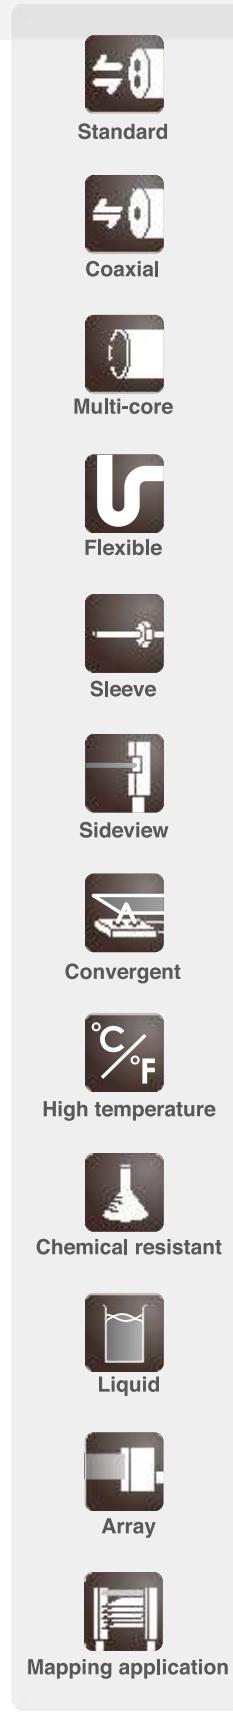

Detecting glass substrate

Detecting wafer position

Detection of mark on sheet

Plastic Fiber Optics - Additional Models Available

In addition to the configurations shown, custom designed fiber optics are available on request:

- Reduce or increase plastic fiber optic bundle diameters.
- Change and tip material from brass to stainless steel.
- Modify straight or angled probe tip dimensions.
- Modify overall fiber length.
- Modify high temperature rating.
- Chemical resistance modifications.

Application notes and Warnings

- Terminated plastic fiber assemblies are optically ground and polished, and cannot be shortened, spliced, or otherwise modified.
- Due to the light transmission properties of plastic fiber optic cables it is recommended that they are only used with amplifiers that have a visible light source. If used with an Infrared LED light source the sensing distance cannot be guaranteed.
- Do not subject the plastic fibers to sharp bends, pinching, high tensile loads, or high levels of radiation.
- Use caution when applying fiber optics in hazardous locations. Although fiber optics assemblies are, by themselves, intrinsically safe, the sensor and associated electronics must be LOCATED IN A SAFE ENVIRONMENT.
- When ordering fiber lengths in excess of 2m, take into account light signal attenuation due to the additional length.

NF series Water(Moisture) Sensing Type(Unique!!)

- Optex FA Water (moisture) sensing type fiber optic cables are designed for use with the “BIF series” amplifiers. A special Infrared LED in the 1.45 micron spectral response range is used as the light source. Water and Humidity will absorb optical energy at this spectral range. The sensor is able to detect the presence of moisture in the target due to the absorption of this energy.
- Thru-Beam and Diffuse types are available.

Water

BIF series

Applications

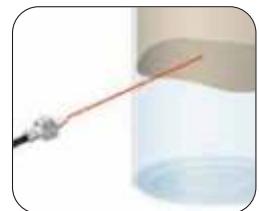

Presence of cold or hot glue in packaging

IV solution bag

Water in the dark colored bottle

Level check of water

NF series Glass Fiber Optics

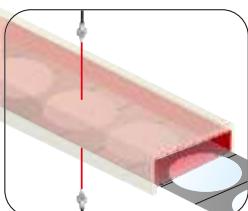

- Optex FA glass fiber optic cables are excellent for use in harsh sensing environments such as high temperatures up to 300°C (572°F), around corrosive materials, extreme moisture, etc.**
- Glass fiber optic cables are constructed of a combination of optical glass fibers, stainless steel, PVC and optical grade epoxy, they are able to withstand high levels of mechanical shock and vibration. They are also immune to electrical noise.**
- Special fibers ideal for various applications are available upon request.**

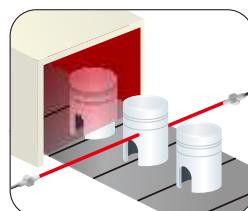

Applications

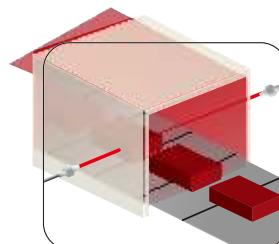

Post heated board

Disks in the furnace

Post heat metals

Bricks in the furnace

Glass Fiber Optics - Additional Models Available

In addition to the configurations shown, custom designed fiber optics are available on request:

- Substitute PVC over monocoil sheathing for stainless steel.
- Reduce or increase plastic fiber optic bundle diameters.
- Substitute a rectangular-shaped fiber bundle (0.5mm x 2.5mm) for a circular bundle, or vice versa.

- Change sensing tip material from brass to stainless steel.
- Modify straight or angled probe tip dimensions.
- Modify overall fiber length.

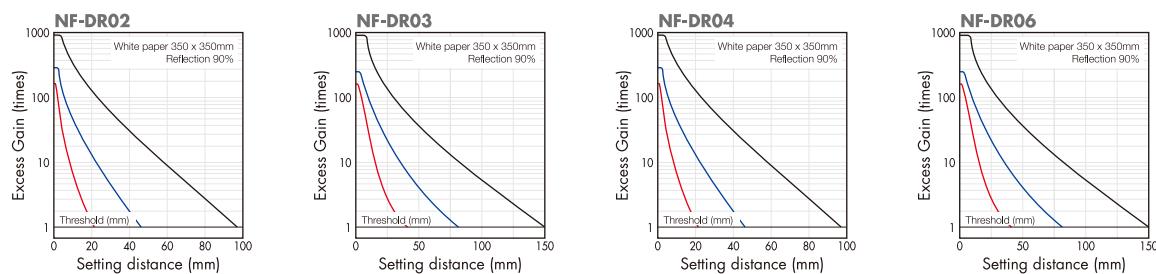

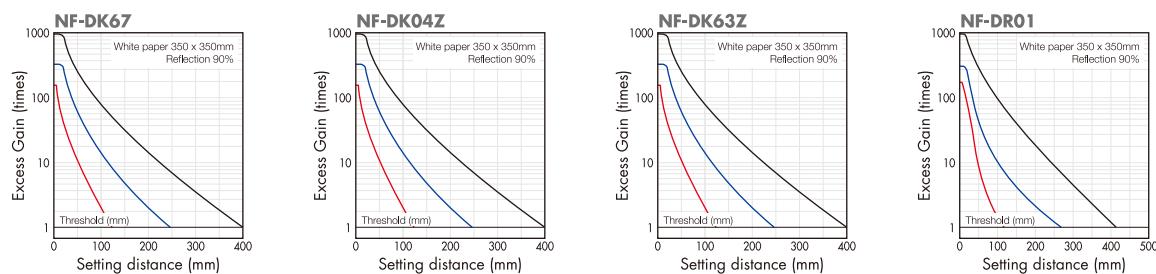

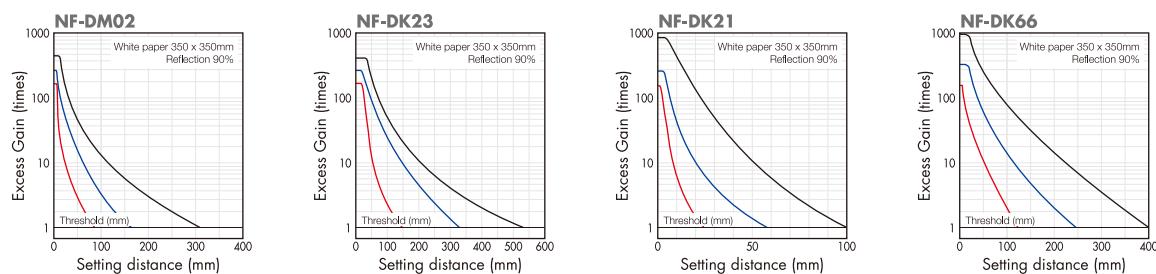

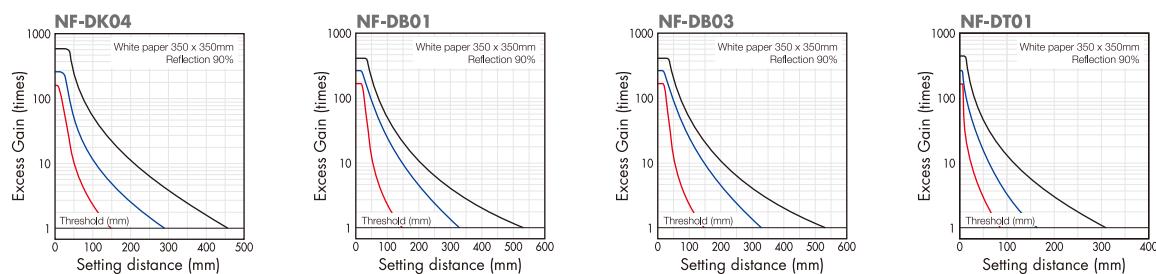

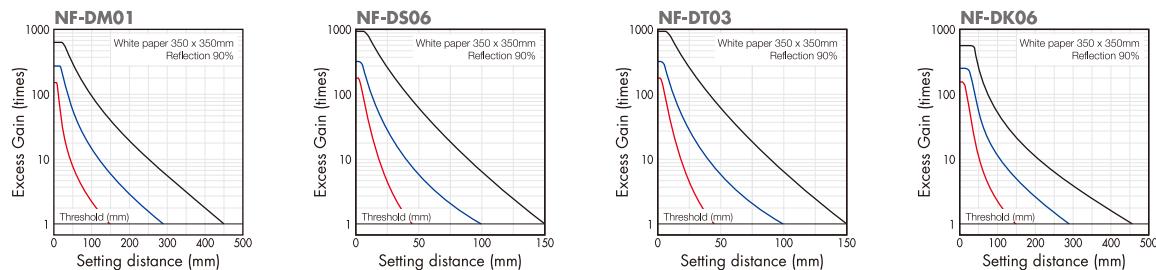

Application notes and Warnings

- The ends of glass fiber optic assemblies are optically ground and polished. Care taken in this manufacturing process accounts for the light coupling efficiency of the fiber optic assembly. As a result, glass fiber assemblies cannot be shortened, spliced, or otherwise modified.
- Terminated plastic fiber assemblies are optically ground and polished, and cannot be shortened, spliced, or otherwise modified.
- Use caution when applying fiber optics in hazardous locations. Although fiber optics assemblies are, by themselves, intrinsically safe, the sensor and associated electronics must be LOCATED IN A SAFE ENVIRONMENT.

- In applications where glass fibers are being used to insulate the control from high voltage, specify silicone rubber, teflon, or high-density polyethylene sheathing with no reinforcing wire in the cable. It is the responsibility of the user to test each fiber optic assembly for insulation capacity.
- Do not subject the fibers to sharp bends, repeated flexing, or high levels of radiation.
- When ordering fiber lengths in excess of 1m, take into account light signal reduction of 5percent per 300mm of additional length.

Fiber Sensor NF02 / NF25 series

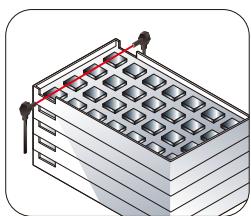

Thru-beam type

- NF02-TK
- NF25-T
- NF25-TH

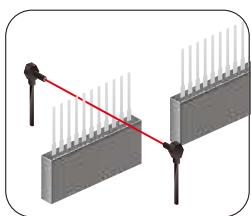

Diffuse reflective type

- NF02-DK
- NF25-D
- NF25-DH

Applications

Detecting IC height

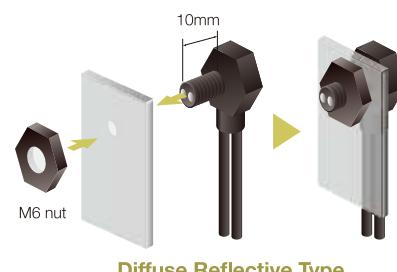

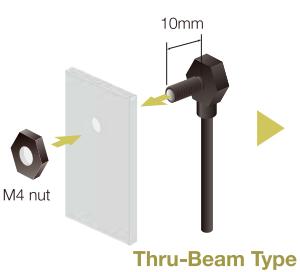

Checking IC pins
(using slit masks)

Features

Easy Mounting

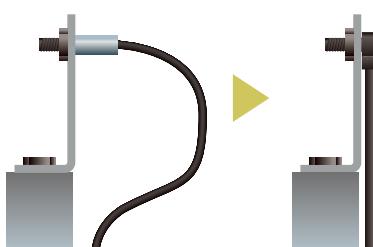

The NF25/02 fiber cables (M4 Thru-beam / M6 Diffuse Reflective) are easily mounted using the threaded tip. All that is required for mounting is a single nut.

The threaded tip is sufficient in length to extend through most mounting surfaces.

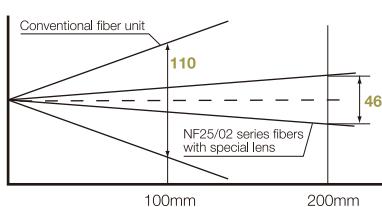

Space-saving installation

The design of the sensing head allows for installation in areas where a standard cable cannot be used.

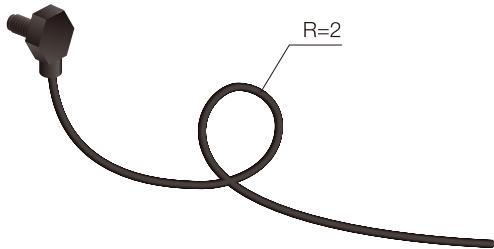

Narrow Beam Angle

The NF25/02 fiber cables have a lens mounted on the tip of the sensing head to project a narrow beam.

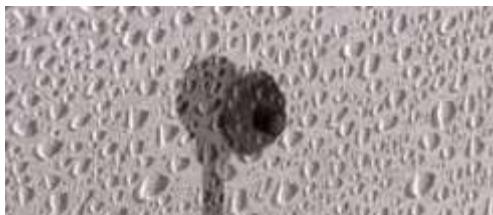

Tight Bend Type NF02 (R=2 mm)

The NF02 series can be bent to a 2 mm radius. This makes it ideal when mounting in areas where space is limited and helps to prevent the cable from becoming entangled with other parts of the equipment.

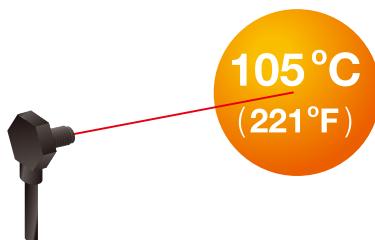

IP67 Rating

Both the NF25 (Regular and High Temp) and the NF02 (Tight Bend) have a plastic housing, making them resistant to water and corrosion.

High Temperature Type NF25-H

The NF25-TH (Thru-beam) and NF25-DH type fibers are designed for use in high temperature applications. The cables are rated up to 105 °C (221 °F).

New Ergonomic Fiber Cutter

The NF25 and NF02 are free cut type fibers. The cutter that is included with the package has been ergonomically designed to make cutting the cable quick and easy.

The NF25/02 fiber cables can be used with any Optex FA Amplifier.

D2RF series
